**CITY OF EAU CLAIRE** — 216 SO. DEWEY ST. EAU CLAIRE, WISCONSIN 54701-3702

March 13, 2000

Senator Richard Grobschmidt, Chairperson  
 Senate Committee on Education  
 P.O. Box 7882  
 Madison, WI 53707-7882

Dear Senator:

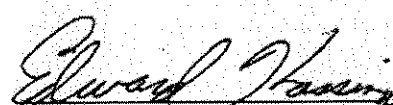

Each year, college-age students die or become severely injured as a result of fires that occur in dormitories on campuses and in off-campus housing all around our great nation. As you know, Assembly Bill 203, which relates to automatic fire sprinkler systems in University of Wisconsin system residence halls, has been recently passed in the State Assembly and is now in your committee for review.

The Eau Claire Fire Department and the entire state's fire service are committed to the elimination or reduction of senseless deaths associated with fire. Fires occur in university student housing more frequently than one can imagine. Several weeks ago, a tragic fire occurred at Seton Hall University in South Orange, New Jersey. The fire occurred at the Boland Residence Hall, a high-rise dormitory (six stories), resulting in 3 student deaths and more than 20 student injuries. Hundreds of other students were forced to evacuate the building out into the bitter cold. Automatic fire sprinklers were not in existence to protect the students in this high-rise dormitory.

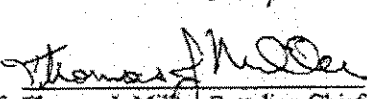

We encourage your committee to act on this bill immediately. It is imperative that this legislation moves forward during this legislative session to the entire Senate for approval. Our students here in Wisconsin deserve this legislation to provide a safe and healthy living environment. Allow Wisconsin to take a pro-active fire safety approach in providing fire sprinkler protection in our high-rise residence dormitories. Please act now!

  
 Ronald W. Brown, Fire Chief

  
 Bruce A. Fuerbringer, Asst. Chief

  
 Edward A. Kassing, Deputy Chief

  
 Lynn N. Koerner Jr., Deputy Chief

  
 Thomas J. Miller, Battalion Chief

  
 Brad N. House, Battalion Chief

  
 James S. Onarheim, Fire Inspector

  
 Janet Harter, Fire Inspector

RE: Support AB 203

AB 203 would provide sprinkler protection to the University of Wisconsin Dorms which exceed 60' in height. We have numerous fire on college campuses across the country every year. Unfortunately for us in the fire service we do not have the ability to oversee every activity in every dorm room of our campuses and accidents occur. The installation of a sprinkler system in every dorm is in effect the equivalent of placing a firefighter in every dorm room of our campuses. We will be providing level of fire protection which we can not provide with firefighters and firefighting equipment.

We do not want to be faced with a tragic event like the one most recently at Seton Hall University, New Jersey which killed 3 students and injured 60. They are now reacting to this tragic event by installing sprinklers in the two dorms which do not have them. We must be pro active and pass this legislation which will provide sprinkler protection before we are faced with a similar situation.

This protection is the minimum that we should be providing the students attending our universities. The parents of the students which are attending our universities send their children to our facilities with the expectation that the universities have used the most up-to date technology to protect their children from hazards which they could encounter on campus, such as sprinkler protection in their residences. The costs are minimal when we consider the consequences of not installing sprinklers, another fire with injuries or even a death to one or more of our students! How much is one student's life worth!

WIRE:02/03/2000 01:10:00 ET

## Seton Hall Plans New Sprinklers

SOUTH ORANGE, N.J. (AP) — Seton Hall University has announced that it will install sprinkler systems immediately in its two dormitories that lack them, including one where a recent blaze killed three students.

Three 18-year-old freshmen died in the January 19 fire at Boland Hall. No charges have been filed, though *The Star-Ledger of Newark* reported Wednesday that investigators believe the fire was set.

University spokeswoman Lisa Grider discussed the sprinklers Wednesday, but referred all questions about the report to the Essex County prosecutor's office. Executive Assistant Prosecutor Charlotte Smith said her office would not comment on it.

The newspaper said investigators believe the fire, which injured more than 60 students, may have resulted from a feud between a group of students and non-students who were in the building the night of the blaze. It said they had not concluded whether the third-floor lounge fire was started as a prank or an attempt to harm someone.

A student resident adviser had asked three visitors to leave Boland Hall less than an hour before the fire broke out. Investigators said they believe one of the three remained in the building, located on the campus of the 9,200-student Roman Catholic university.

The resident adviser, Dana Christmas, 21, remained in critical condition Wednesday (02/03/00) with severe burns and has yet to speak with investigators. Three other students who are in critical condition also have not been interviewed.

## An Estimated 1700 Fires Hit U.S. College Campuses Annually

With an estimated 1700 fires hitting U.S. college campuses annually, the Federal Emergency Management Agency (FEMA) through the U.S. Fire Administration (USFA) and the College Parents of America (CPA) are urging every college community to take time to focus on fire safety.

"The loss of the best and brightest of America's future is unacceptable," said FEMA Director James Lee Witt. "We must work together to prevent any future losses."

"Smoke alarms and automatic sprinkler systems have established an impressive fire prevention record, particularly in the hospitality industry," said USFA Administrator Carrye B. Brown. "Automatic sprinkler systems are now commonplace in hotels and motels, where they afford the travelling public with a high level of fire safety."

Over 90 percent of the reported fires in college dormitories, classroom buildings, fraternities and sororities occurred where smoke alarms were present. However, only 27 percent had sprinklers present. Within the dormitories, the No. 1 cause of fires is arson or suspected arson. The second leading cause of college building fires is cooking, while the third leading cause is smoking.

"As part of the college evaluation, parents should make sure there are smoke alarms, sprinkler systems, and scheduled drills in their children's residential and classroom buildings, stressed Richard M. Flaherty, President of College Parents of America.

Parents and students also can contact their campus to view *Get Out and Stay Alive*, which was distributed to colleges around the country as a component of USFA's campus fire safety training kit. The USFA video and its accompanying training kit are designed to educate college students about the importance of day-to-day fire safety and prevention measures in residence halls and off-campus housing.

For more information on campus fire safety, visit both the U.S. Fire Administration's web site, [www.usfa.fema.gov/safety/college.htm](http://www.usfa.fema.gov/safety/college.htm) (or call 202/646-4600) and College Parents of America's website, [www.collegeparents.org](http://www.collegeparents.org) (or call 202/661-2170) and look under "Breaking News" for Fire Safety Tips.

## Students Evacuated at Ohio College During Dorm Fire. No injuries reported

Dozens of students were evacuated from a residence hall at Heidelberg College in Tiffin, OH, on January 22, 2000 after a fire broke out in the top floor of the building.

No one was injured, college officials said. Those in the building were evacuated and immediately directed to another dormitory across the street.

Police responded to reports of a fire at 93-year-old Williard Hall shortly after 4 a.m., Heidelberg spokesman Jamie Abel said. The three-story dorm houses 63 students.

Those students will stay in other housing and the building will not be used for the rest of the school year, Abel said. There was no word on what caused the fire, which was confined to the top floor, or how much damage was done.

"We just want parents to know that all the kids are all right, in light of Seton Hall earlier this week. Everyone is accounted for and no one was injured, thankfully," Abel told CNN.

Heidelberg, a private college, has 1,200 students and is located in Tiffin, about 40 miles southeast of Toledo in northwestern Ohio.

Three students died in a fire at a Seton Hall University dormitory in New Jersey earlier this week. A grand jury has since subpoenaed fire inspection records and engineering plans for the building, which did not have sprinklers.

### Sprinklers, Alarms in Place

Abel said Williard Hall was fitted with fire alarms and an updated sprinkler system in 1993. It was originally built in 1907.

Two buildings near Williard were evacuated as a precaution, Abel said. One building is a dorm that shares a hallway with Williard. The other is a former private residence owned by the college.

**Senate Committee on Education**

**Assembly Bill 203**

Testimony by David L. Miller  
Assistant Vice President, University Relations  
March 15, 2000

Chairman Grobschmidt, and members of the committee, good morning. My name is David Miller and I am speaking in support of this bill on behalf of the University of Wisconsin System and Board of Regents. The UW System recognizes and appreciates the importance of this legislation to provide adequate fire protection for student occupants of high-rise residence halls. Our first priority continues to be to protect the lives of students.

This bill would require that all existing and future UW System high-rise residence halls be fitted with automatic sprinkler systems on each floor by January 1, 2006. We especially appreciate the effort of the bill's authors to work with UW System to extend the implementation deadline until 2006 because most all of this work will be completed during summer months to minimize inconvenience to students. Currently, five UW System campuses have such residence halls. The Department of Administration estimated the cost of retrofitting these buildings with sprinkler systems at approximately \$3.75 per square foot. This is only an estimate and actual costs will vary depending on final sprinkler system design. The per-campus cost of retrofitting these buildings is estimated to range from \$890,000 at UW-Eau Claire to \$2,300,000 at UW-Milwaukee.

All costs for residence halls are funded through student fees. Currently, residence hall fees at the five affected institutions range from \$1,710 (UW-Whitewater) per year to \$2,314 (UW-Milwaukee) per year. This cost covers construction debt service and operation. Specifically, operational costs include such items as heating, plumbing, municipal services, custodial services, computer labs and resident assistants.

As the fiscal note explains, student fee increases required to fund this improvement, when amortized over a 20-year period, would range from \$22 per year at UW-Whitewater to \$100 per year at UW-Milwaukee. As a percentage, the increases would range from 1.3% at UW-Eau Claire to 4.3% at UW-Milwaukee. The average annual residence hall fee increases system wide have been about 4.6% over the last 5 years.

The UW System has an ongoing priority list of health and safety projects to be funded and completed in 1999-01 and in future biennia. These projects include upgrading fire alarm and smoke detection systems, asbestos/lead abatement, CFC hazardous substance protection, ventilation upgrade/code compliance, water supply upgrades for fire fighting, emergency communications systems including blue light phones and others.

Thank you for your time this morning. If you have any questions, we would be happy to try to answer them.

## US SENATE BILL AIMS TO PREVENT FIRE TRAGEDIES ON CAMPUSES BY FUNDING FIRE SPRINKLER RETROFITS

MILWAUKEE, WI, March 10, 2000 —Following a dormitory fire in January at Seton Hall University that left three students dead and six critically injured, Sen. John Edwards, D-N.C. and Sen. Frank Lautenberg, D-N.J. have introduced a bill into the United States Senate that would provide funding for the installation of fire sprinkler systems in college dormitories, fraternities and sororities.

According to the National Fire Sprinkler Association (NFSA), only one fourth of campus housing is presently safeguarded by sprinkler protection. Independent testing has shown that sprinklers improve the likelihood of surviving a fire by over ninety percent.

Between 1980 and 1997 there were an average of 1,800 fires each year on U.S. college and university campuses, resulting in a total of 17 deaths, 1,173 serious injuries and \$136 million in property damage. Arson, suspected in the Seton Hall fire, seriously jeopardizes student safety. One in six fires on U.S. campuses is arson-related.

"Parents have a false sense of security about how safe their children are on campus," noted Dan Gengler, Regional Manager, NFSA. "Many parents assume that dormitories have fire sprinklers installed when they do not. I would encourage parents to check for sprinklers during their initial campus tour."

The NFSA strongly supports the Senate bill which would appropriate \$100 million annually from 2001 to 2005.

*Established in 1905, NFSA is a trade association comprised of installers and manufacturers of fire sprinklers and related equipment and services.*

###

## **College Fire Safety**

The following bill was introduced in the U.S. Senate on Thursday, February 24, 2000.

---

**S 2100 IS - 106th CONGRESS - 2d Session**

**S. 2100**

**To provide for fire sprinkler systems in public and private college and university housing and dormitories, including fraternity and sorority housing and dormitories.**

### **IN THE SENATE OF THE UNITED STATES**

**February 24, 2000**

**Mr. EDWARDS (for himself, Mr. LAUTENBERG, and Mr. TORRICELLI) introduced the following bill; which was read twice and referred to the Committee on Health, Education, Labor, and Pensions**

---

#### **A BILL**

**To provide for fire sprinkler systems in public and private college and university housing and dormitories, including fraternity and sorority housing and dormitories.**

**Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,**

#### **SECTION 1. SHORT TITLE.**

**This Act may be cited as the 'College Fire Prevention Act'.**

#### **SEC 2. FINDINGS.**

**Congress makes the following findings:**

**(1) On Wednesday, January 19, 2000, a fire occurred at a Seton Hall University dormitory. Three male freshmen, all 18 years of age, died. Fifty-four students, 2 South Orange firefighters, and 2 South Orange police officers were injured. The dormitory was a 6-story, 350-room structure built in 1952, that housed approximately 600 students. It was equipped with smoke alarms but no fire sprinkler system.**

**(2) On Mother's Day 1996 in Chapel Hill, North Carolina, a fire in the Phi Gamma Delta Fraternity House killed 5 college juniors and injured 3. The 3-story plus basement fraternity house was 70 years old. The National Fire Protection Association identified several factors that contributed to the tragic**

fire, including the lack of fire sprinkler protection.

(3) It is estimated that in a typical year between 1980 and 1997, there were an average of 1,800 fires at dormitories, fraternities, and sororities, involving 1 death, 69 injuries, and \$8,100,000 in property damage.

(4) Within dormitories the number 1 cause of fires is arson or suspected arson. The second leading cause of college building fires is cooking, while the third leading cause is smoking.

(5) The National Fire Protection Association has no record of a fire killing more than 2 people in a completely fire sprinklered public assembly, educational, institutional, or residential building where the sprinkler system was operating properly.

(6) New dormitories are generally required to have advanced safety systems such as fire sprinklers. But such requirements are rarely imposed retroactively on existing buildings.

(7) In 1997, over 90 percent of the campus building fires reported to fire departments occurred in buildings where there were smoke alarms present. However, only 28 percent had fire sprinklers present.

### **SEC. 3. AUTHORIZATION OF APPROPRIATIONS.**

There are authorized to be appropriated to carry out this Act \$100,000,000 for each of the fiscal years 2001 through 2005.

### **SEC. 4. GRANTS AUTHORIZED.**

(a) **PROGRAM AUTHORITY-** The Secretary of Education, in consultation with the United States Fire Administration, is authorized to award grants, on a competitive basis, to States, private or public colleges or universities, fraternities, or sororities to assist them in providing fire sprinkler systems for their student housing and dormitories.

(b) **MATCHING FUNDS REQUIREMENT-** The Secretary of Education may not award a grant under this section unless the entity receiving the grant provides, from State, local, or private sources, matching funds in an amount equal to not less than one-half of the cost of the activities for which assistance is sought.

### **SEC. 5. PROGRAM REQUIREMENTS.**

(a) **AWARD BASIS-** In awarding grants under this Act the Secretary of Education shall take into consideration various fire safety factors and conditions that the Secretary determines appropriate.

(b) **LIMITATION ON ADMINISTRATIVE EXPENSES-** An entity that

receives a grant under this Act shall not use more than 4 percent of the grant funds for administrative expenses.

#### **SEC. 6. DATA AND REPORT.**

**The Comptroller General shall--**

**(1) gather data on the number of college and university housing facilities and dormitories that have and do not have fire sprinkler systems and other forms of built-in fire protection mechanisms; and**

**(2) report such data to Congress.**

RE: Assembly Bill 203: Fire Sprinkler Systems in High Rise Dormitories

---

I am writing to you today not only as Wisconsin's Regional Manager of the National Fire Sprinkler Association, but also as a 26 ½ year veteran of the Milwaukee Fire Department, as a father, and as a grandfather. I have two sons who graduated through the UW system, both of whom resided in residence halls. I hope my grandson will also have the opportunity to attend a UW school and that he will be better protected by residing in a fire-safe dormitory.

I have seen many lives lost as a result of a fire, and I have seen countless friends and family members suffer at the hands of that loss. Sprinkler systems could have spared those lives, and I cannot stress to you enough the importance of your support in the effort to pass Assembly Bill 203. This legislation would require all University of Wisconsin residence halls over 60 feet tall to be retrofitted with an automatic fire sprinkler system on each floor by January 1, 2006. It also requires new residence halls to be equipped with an automatic fire sprinkler system on each floor during construction.

You have all likely heard extensive media coverage of the dormitory fire and resulting deaths and injuries at Seton Hall this year. This was a senseless tragedy. The Seton Hall dormitory was not equipped with a fire sprinkler system. What you probably did not hear about are those campus fires that were safely controlled and extinguished – the lives, injuries, and suffering that were spared as a result of fire sprinkler systems. Enclosed, I have provided you with some of the good news – a recent article about a fire at Eastern Illinois University in Charleston, and information about a fire at Heidelberg College in Tiffin, Ohio.

We require all Wisconsin jails to be equipped with fire sprinkler systems to protect the inmates, yet we do not provide the same protection to our college students. Assembly Bill 203 offers us an opportunity to do better – to improve the level of safety for UW students residing in high rise college dormitories. Fortunately, we in Wisconsin have this opportunity to enact proactive fire safety legislation and prevent a tragedy, rather than react to one. I urge you to embrace this opportunity, protect our UW students, and support Assembly Bill 203.

# Second fire evacuates Taylor

## No injuries or damage caused by blaze; cause unknown

By Amy Thon  
News editor

For the second time in as many weeks, the residents of Taylor Hall Monday were evacuated after a fire started in the trash chute, firefighters said.

No one was hurt and no damage was reported as a result of the fire that began about 7:45 p.m.

"We don't know how it started. We will attempt to find out," said Darrell Nees, Charleston fire chief. "We're actively pursuing this."

Students were evacuated and allowed back in the building at

about 9 p.m.

"This time it took longer to let people in because we actually aired out the floors," said Amy Price, resident director. "(The smoke) was pretty bad."

Nees said a considerable amount of smoke was in the building.

A meeting with all residents was held immediately after students were allowed back in the building. Residents were encouraged to be more careful with what they throw down the trash chute, Price said.

She said the firefighters looked through all the trash to help deter-

mine the cause of the fire. The sprinklers also went off on the third floor, which may indicate the fire started near the third floor.

"We're sick of this," said Cathy Jones, a sophomore chemistry major. "We've been down here like an hour and 1/2."

Jones said the residents are frustrated because of the evacuation, and that the problem has repeatedly been in the north tower of the building.

Fans were brought in to air out the building, said Terry Newell, member of the Charleston fire department.

## **Youth Safe in Ohio Dorm Fire**

---

**Related Article** [Fire, Prayer and a Loss of Innocence at Seton Hall](#) (Jan. 23, 2000)

---

A fire in a limestone dormitory at a small Ohio college early yesterday forced the evacuation of several dozen students, but the 93-year-old building's new alarm and sprinkler system helped awaken the residents and prevent any student injuries, a college spokesman said.

The fire in the three-story dormitory at Heidelberg College in Tiffin, Ohio, about 40 miles southeast of Toledo, broke out around 4 a.m., said the spokesman, Jamie A. Abel.

The 63 students who lived in dorm, Williard Hall, were all safely evacuated by the time firefighters arrived, Mr. Abel said.

Major renovations to the dorm in 1993 added alarms and a sprinkler system, Mr. Abel said.

### **Contractor Costs for Installation of Fire Sprinkler Systems in Dormitories**

The \$3.75 per square foot estimate provided in the fiscal note is not commensurate with current actual costs as provided by contractors throughout the state. For example,

- Integrity Fire Protection, located in Schofield, provided a budget cost of \$1.75 - \$2.00 per square foot to "retro-fit existing dormitories with complete and operable automatic sprinkler systems." (4/99)
- United State Fire Protection, located in New Berlin, provided a budget cost of \$1.75 - \$2.00 per square foot to retrofit a "typical dormitory type building with exposed fire sprinklers." (4/99)

Also,

- United State Fire Protection, located in New Berlin, was recently awarded the contract to retrofit Chadbourne Hall, located at the UW-Madison. The cost is \$2.36 per square foot (\$359,830 total cost for 152,509 square feet). It is important to know that the cost includes several extra costs not typically included in such a project, including a fire pump and overtime costs to complete the project in one summer.

Fire sprinkler contractors contend that the \$2.36 per square foot cost reflects addition costs that may not be present in other dormitory projects. In addition, please know that fire sprinkler installation costs have remained relatively constant over the last decade, while other construction cost has significantly risen. This is due to technological advances that have offset the rising cost of labor.

### **Insurance Costs / Costs of Self Insurance**

It is not uncommon for insurance costs to be reduced up to 50% for commercial buildings that are fire sprinklered. It is the case, however, that the University of Wisconsin dormitories are self-insured. Considering this, if a fire did occur in a UW residence hall, there would be extensive costs to the University to rebuild the damage. In addition, in the event of a fire survivor who has been seriously injured, the cost of a single potential lawsuit could be far greater than the cost to install a full fire sprinkler system.
